Autodesk on Friday announced the release of AutoCAD Architecture 2010 software that uses a new software component architecture called CAD-2D. This is a complete architecture change from a previous product using CAD-3D which, according to Autodesk was no longer consistent with CAD-2D. Features AutoCAD Architecture 2010 introduced an XML and JavaScript-based programming architecture that integrates graphical and programming-based design, along with the use of JavaScript to modify object settings. Support for dynamic objects was included in the new design, and work can be performed through a sequence of commands instead of having to enter each step of the process manually. This dynamic workflow is based on the Component Object Model (COM) and follows Microsoft COM as well as Extensible Markup Language (XML) standards. The dynamic workflow also applies to the Linked Graphic Objects System (LGO) and the drawing settings can be saved and shared through the use of an embedded database. Other new features in the 2010 release include the ability to generate an assembly drawing for hand, computer-controlled, and milling tools, a spline editor which can be used to draw freeform splines, and the ability to perform object location and synchronization, object properties and annotations and an integrated link command. Revit, Architectural Desktop and Bentley MicroStation versions also made the transition to the new architecture. AutoCAD Architecture 2010 was the first release of AutoCAD to support the new JavaScript based programming language, which allows designers to create, modify and customize the software using scripting. JavaScript is a language developed by Netscape to add interactive functionality to web pages. AutoCAD Architecture 2010 is the first CAD application to use the JavaScript programming language to enhance the user experience. The programming environment is based on a new XML and JavaScript architecture, allowing designers to script drawing creation, modification, and customization. The architecture is based on an XML standard, which makes it possible for users to save their work as XML files, enabling for easy transfer and sharing. AutoCAD Architecture 2010 features a new graphical user interface (GUI) which is based on the Graphical User Interface (GUI) introduced in AutoCAD 2010, and a single ribbon-based interface to all of the drawing commands in the software. AutoCAD Architecture 2010 includes a new dynamic ribbon-based interface, and a new XML and JavaScript programming architecture, which enables designers to script drawing creation, modification, and customization. The ribbon-based interface provides a single interface for a1d647c40b

What's New in the AutoCAD?

Add AutoCAD's most common text styles, including handwriting and scanned text, to your designs without the need for a text editing software tool. (video: 4:43 min.) Paintbrush tool becomes even more powerful in AutoCAD. You can use the color range and gradient to draw very complex shapes without the need for sketching. Paintbrush will automatically draw curves and make lines thicker where it encounters resistance from your underlying surface. (video: 4:43 min.) New functionality in the Application Experience: Recent design jobs are now a swipe away in the favorites list. Drag a job from the favorites list to your favorite list. You can now add a photo to a new drawing. Open the "Photo" dialog box and select a photo. You can also import a photo from a file. The navigation pane displays views of your drawings as your design projects change. The link to Inkscape is now available in the "Favorites" button. Just click the Favorites button to open Inkscape in a new window. You can now use AutoCAD 360° in all layouts, including 2D, 3D, and other layouts. AutoCAD 360° allows you to export a drawing, including all layers, and scale, rotate, and reflect it in AutoCAD or SketchUp. (video: 4:43 min.) Overlays can now be used for paper templates, such as ISO and A4 paper. This allows you to use one template for designing 2D drawings and another for designing 3D models. You can now share views of your 2D drawings with your 3D model. You can quickly toggle between a 2D and a 3D view of the same part of your drawing. AutoCAD receives support for Windows 10 AutoCAD will work better on Windows 10. AutoCAD has been tested and works on Windows 10. 3D Design has received several improvements and new features 3D can be used on AutoCAD designs. A 3D model can be viewed from any angle, as long as you're on the same layout as the original. You can also view the surface of a 3D object, just as you would with a 2D object. You can now design on 3D and 2D drawings at the same time. Animate components in 2
