Learn how Markup Assist can boost productivity and transform your collaboration process. Rapidly import feedback from PDFs or printed paper To avoid having to draw multiple lines, AutoCAD adds one line to the drawing where the user clicks. Since the lines don't form a closed shape, it's difficult to determine the drawing area. This issue can be resolved by converting the lines to markers. To ensure that the lines don't overlap other areas, AutoCAD checks if the lines don't intersect other areas. Using the Import Markup Assist dialog box, you can import feedback from PDF or printed paper in the following ways: By simply opening the file in your drawing program. Automatically import the required file from the PDF. Choose a range of lines to import. To open a specific range of lines in your drawing, you can enter the range value in the "Max" box. Select the range of lines to import. By checking "Use", the imported lines will be drawn automatically. The imported lines are separated by dashed lines that can be changed to the color of your choice. Check the "Use" box. Using Markup Assist with drawings that include multiple files, such as design models, can be a time-consuming process. Instead of selecting each file, you can automatically import the required files and select the desired ranges of lines. You can also choose to import the corresponding layers. To change the selection, click the "Import Files" button. Import the corresponding layers. Collaboration is a vital part of a successful design. To support designers in their collaboration with other parties, AutoCAD 2023 includes additional tools. Snap tool: With the new snap tool, you can draw right on the surface of the object.
